

60% reduction in project costs

revolutionising
the **GP booking**
process with **AI**

challenge

GP Triage set out to modernise the traditional **GP** booking process with an AI-driven system capable of automatically assessing patient symptoms, determining severity, and allocating appropriate appointment slots. The challenge lay in building a sophisticated solution that seamlessly integrated with existing NHS systems while enabling real-time automation—without disrupting **GP** surgeries or requiring costly infrastructure overhauls.

solution

Cloud Surge empowered **GP Triage** with a flexible, on-demand Fusion Pods team, delivering expert technical support precisely when needed. Our agile approach complemented **GP Triage's** lead architect and product owner, ensuring rapid development without overburdening their core team.

Leveraging **Microsoft's Power Platform** and **Azure**, we developed a scalable solution that seamlessly integrated into **GP** workflows:

- ⚡ **Dataverse** for secure, centralised data management.
- ⚡ **Power Pages & Azure Health Bot** for patient-facing triage and appointment booking.
- ⚡ **Azure Functions, Logic Apps & Power Automate** for back-end automation, ensuring smooth, real-time processing of patient data.

This strategic use of **Power Platform** and **Azure Health Bot** enabled a robust, efficient system that optimised GP appointment scheduling while enhancing patient experience.

the outcome

Cloud Surge's on-demand **PowerPods model** gave **GP Triage** the agility to meet ambitious project timelines without the constraints of permanent hiring. Our support provided **specialist expertise exactly when needed**, preventing resource shortages that could have delayed or even derailed the initiative.

Scalability & Flexibility

Our plug-and-play model meant GP Triage could scale resources up or down as needed, ensuring efficiency without unnecessary costs.

Cost Efficiency

By eliminating the need for full-time hires, GP Triage significantly reduced overheads, allowing budget reallocation to core priorities.

Faster Time-to-Market

We enabled GP Triage to successfully meet tight MVP deadlines, ensuring project momentum.

We continue to support GP Triage as an extension of their delivery and support team with the ability to bring in resources as and when required for bug fixes and updates.

Working with **Cloud Surge** had a significant impact on our team. Before partnering with them, we were stretched thin, balancing multiple priorities and deadlines. Their expert Pods alleviated workload pressure, allowing our core team to focus on strategic priorities while Cloud Surge handled the technical execution. The result was a more manageable workload, reduced stress, and improved overall morale.

Cutting edge AI chatbot solution
for GP surgeries.
